

System overview

Indoor swimming pool air conditioning | Comfort air conditioning | Process air conditioning

menerga
a systemair company

Menerga: Minimal Energy Application

We supply air conditioning systems individually designed for your requirements. Our philosophy, "Creating a good indoor climate – through Minimal ENERGY Application", is something we have succeeded in every single day, since the company was founded over 30 years ago. We are proud to be part of the international successful Systemair group since 2013.

Our systems are first-class, intelligent works of engineering and handcraft. They remain reliable in operation for many, many years, significantly reducing operating costs. How is this possible? In the basic design stages we already integrate all the components for air conditioning, such as the ventilation, heating and refrigeration systems and equip everything with an intelligent control and regulation system. Every

system is fully tested before delivery within the framework of a test run. The compact units are always delivered "ready for connection". At the building site, they are connected up and made operational in just a few work stages.

With over 40,000 systems installed worldwide, we cover almost every application. We not only sell the units, but also offer you our many years of experience. When looking for the best solution, we analyse the specific conditions at the location together with you. For the optimal solution we ask a lot of questions. Might it also be possible to use an alternative source of energy in order to reduce the operating costs even further? In this manner, we and our partners have jointly implemented countless projects which have received many awards for energy efficiency. We

are proud of this. But what we really like about this is the know-how from jointly developed solutions, which allows operators and investors to save hard earned money – day after day, month after month and year after year. The investment costs are amortised within a short period.

We will be happy to produce reference lists for the building types in which you are interested in. And in the event that you surprise us with a totally new project: We are convinced to find the right solution for you. With our eyes sharpened by countless special projects, e.g. the „ALMA“ telescope facility in the Atacama desert or the “Princess Elisabeth Station” at the South Pole, we will be happy to accept the challenge.

Convincing arguments for Menerga

- Intelligent Technology
= lasting low operating costs
- Use of regenerative energy sources
- Very compact design
- Integrated control and regulation systems
- Factory test run as standard
- Ready-for-connection delivery
- Excellent maintenance concepts

Menerga participates in the Eurovent Certified Performance programm for Menerga Air range. Check ongoing validity of certificate: www.eurovent-certification.com or www.certiflash.com

Eurovent

Most of our ventilation units are as standard version Eurovent certified. This means the following series of the Menerga Air range with 50 mm panels and filter classes up to F7/F9: ThermoCond 38/39, Drysolair 11, Adcoolair 75, Trisolair 52/59, Dosolair 54, Adsolair 56/58, Resolair 62/64/66/68, Sorpsolair 72/73 and Adconair 76

Passivhaus Institut

The complete Resolair 64 series and Adconair up to 76 16 01 are officially certified components of the Passive House Institute. They are ideally suitable for passive houses and all other low energy buildings.

ATEX

The ATEX directive currently includes two directives in the field of explosion protection, the ATEX Directive 94/9/EC and the ATEX Workplace Directive 1999/92/EC. On request we produce your unit according to the ATEX regulations for explosion-hazardous areas.

Manufacturers Association „RLT Hersteller Verband“

Menerga is a member of the german Manufacturers Association for AHU „Herstellerverband Raumluftechnische Geräte e.V.“. Aim of this Association is to develop air handling units at the highest technical level as well as standardization work and technical recommendations.

Ecodesign directive

Most of our units fulfill the requirements of the Ecodesign directive from January 2018 already. With Menerga you can now already plan all the projects for the year 2018.

Of course we also have all common other certificates such as TÜV type examinations, hygiene certificates, ISO 9001 and more. Please contact us - we are happy to send you an overview or copies of the certificates you might require.

Experts at your service Technical Service

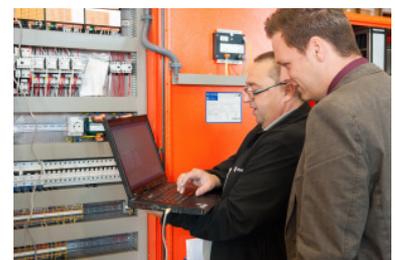

Experts at your service, anytime, anywhere. With a comprehensive range of services and an extensive service network throughout Europe, the Menerga Technical Service guarantees the most economical and advanced services over the entire life cycle of your system, from the day of commissioning onwards.

More than 120 service technicians at various service centres and 40 service engineers at the Menerga locations provide a professional all-inclusive service with the objective of achieving high availability of the systems and maximum efficiency. The range

of services offered by the Menerga Technical Service covers everything from the test run at the factory and on-site commissioning through periodic servicing, repairs, remote maintenance and remote diagnosis by means of direct dial-up options, to the refurbishment and optimisation of the systems. And this all not only for Menerga units!

We supply you with the right service, customer-specific and application-specific. In the event of an emergency, you can reach us 24 hours a day on the following telephone number:

Menerga core competencies

Our areas of application

© City of Rijeka

INDOOR SWIMMING POOL AIR CONDITIONING

Private swimming pools, public swimming pool halls, adventure pools, sports pools, saline baths, hotel pools, school pools, therapeutic pools and many more.
Last not least: heat recovery from waste water.

The air conditioning of swimming pool halls is one of the most challenging areas for air conditioning. Here we started 35 years ago, this is where we grew up and where we are now market leaders and innovation pioneers. Our special competency lies in the high heat recovery efficiency lowering operating costs..

COMFORT AIR CONDITIONING

Low-energy buildings, offices, museums, sports facilities, schools, clinics, hotels, banks, historical buildings and many more.

With comfort air conditioning, the focus is on people. Our technology is based on the respective requirements of a project, but we also always look for the most efficient method with the lowest consumption of energy. For example, we cool with water in order to save electrical energy or make use of sorption-based air conditioning, with which you dehumidify with heat, e.g. from solar thermal energy or process waste heat. It is even possible to store excess solar heat for an indefinite period without any losses for the purposes of dehumidification.

PROCESS AIR CONDITIONING AND CHILLED WATER

Air conditioning of data centres, industrial drying, process cooling, air conditioning for warehouses, cold water generation and much more.
Last but not least: heat recovery from waste water.

The process air conditioning system must ensure that defined air conditions prevail in a defined situation. Menerga systems guarantee reliable drying, cooling or heating. In the field of chilled water, our systems reliably provide the desired water conditions. Saving energy through the use of intelligent technology is our top priority in this sector as well.

© polarfoundation.org

SPECIAL SOLUTIONS

Research projects, special applications

Challenges and unusual projects are the milestones of Menergas company history. Since the foundation of our company, we have designed individual solutions for many of our customers. We enjoy taking on challenging projects, knowing that these are the projects that bring valuable experience and which also improve the quality of our "standard" systems.

Insight: Technology in detail

1 Quality: Menerga systems are developed in Germany and focus on highest quality.

2 Profiles and frames: the equipment design is based on a long-lasting, robust aluminum steel frame. Housing designs are available up to the highest thermal bridge class TB1.

3 Control and regulation: our systems are ready to connect upon delivery. The intelligent control & regulation equipment guarantees that the system always performs optimally.

4 Filters: all HVAC systems are equipped with an optimised filtration system to protect both people and equipment.

5 Heating or cooling coils: for covering the transmission heating or cooling requirement.

6 Fans: energy-efficient EC fan motor units.

7 Indirect adiabatic evaporative cooling: for cooling purposes, we use natural processes wherever possible, e.g. cooling with water.

8 Heat exchangers: we use polypropylene instead of aluminium with a big increase in efficiency and thus minimise both the weight of the system and CO₂ emissions during production.

9 Droplet eliminator: efficient mist collectors reliably eliminate aerosols from the air and prevent moisture from being carried into the air ducts.

10 Air damper systems: for precise control of the air flow.

11 Air distribution: intelligent bypass designs for efficient operation all year round.

12 Compressor refrigeration system / heat pump: meets the requirements of DIN EN 378 and is type-tested and certified in accordance with the pressure equipment directive. Individual acceptance is no longer necessary.

Automatically selects the most economical operating mode!

ThermoCond 29 20 01 - simplified illustration

ThermoCond 19/23/29

COMFORT THROUGH INTELLIGENT SWIMMING POOL TECHNOLOGY

The ThermoCond 19, 23 and 29 series are multifunctional compact systems for air conditioning private swimming pool halls. The combination of first-class components with precise control and regulation systems guarantees economi-

cal operation at all times, while ensuring the highest degree of comfort air conditioning. ThermoCond systems dehumidify, heat and ventilate the swimming pool hall and simultaneously create a good climate while protecting

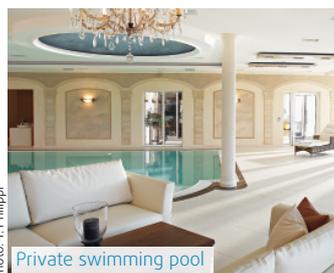

the fabric of the building. Additional heat sources such as radiators or panel heating systems are generally not required.

At a glance:

- Dehumidifies, ventilates and heats
- Corrosion-free heat exchanger made from polypropylene
- Energy-saving unit design
- Compact design for minimal space requirements
- Integrated control and regulation system, compatible with all conventional building management systems

ThermoCond 38/39

A GOOD CLIMATE FOR PUBLIC INDOOR SWIMMING POOLS

Thanks to intelligent technology, the units in the ThermoCond 38 and 39 series achieve continuous comfort coupled with consistent energy efficiency. ThermoCond 38 is equipped with a full counterflow plate heat exchanger that achieves a heat recovery efficiency of over 95%*. The system can be equipped with an additional clean water heater that increases the efficiency of the entire system even further.

REGENERATIVE HEAT RECOVERY

Resolair 68 10 01 - simplified illustration

Eurovent seal refers to range Menerga Air, more information on page 6. Check ongoing validity of certificate: www.eurovent-certification.com or www.certiflash.com
Passive House seal refers to series 64

Units in the Resolair 62 and 66 series use regenerative heat recovery technology to achieve the highest heat recovery efficiency with low internal pressure losses. These are characterised by both high thermal and high electrical efficiency.

A compressor refrigeration system integrated into 66 and 68 series increases the cooling capacity of the overall system at high temperatures.

Resolair 62/64 with highly efficient regenerative heat storage accumulators

Units with max. volume flow 51.000 m³/h and special units on request.

- 1 Door fitting assembly increases unit width by 25 mm each operating side (series 62 und 66) respectively 65 mm (series 64 und 68). Refrigerant pipe duct on backside of units of series 66 increases unit width by 80 mm.
 - 2 Height incl. 100 mm unit feet and 60 mm cable duct (series 62 und 66) respectively incl. 120 mm base frame, incl. 60 mm cable duct (series 64 und 68)
 - 3 May require alteration of the technical equipment
- * Controls cabinet arranged on top of unit, please add controls cabinet height (480 mm).

For service work, a clearance corresponding to dimension width is required on the operating side of the unit. If the width is smaller than one metre, please leave a clearance of one metre. For service work above the unit, please allow 50 mm working height clearance above the cable duct. Please comply with the dimensions for body size, air duct connections and electrical switch cabinet. Please seek approval of technical data and specifications prior to start of the planning process. With every single selection we do to your individual requirements our certified selection software automatically checks the Ecodesign compliance level 1 and 2.

Specifications of technical data relate to the optimum flow rate and return air condition 22° C / 40% r.h., outside air condition -12° C / 90% r.h. and standard density (1.204 kg/m³), unless otherwise specified.

Sorpsolair 73 22 01 - simplified illustration

Sorpsolair

COOLING WITH THE SUN

Automatically selects the most economical operating mode!

Units in the Sorpsolair 72 and 73 series were developed especially to use regenerative energy. The innovative air conditioning concept combines sorption-based dehumidification, adiabatic evaporative cooling and an efficient heat recovery system in a compact comfort air conditioning unit. The 72 series, without a

brine tank, is suitable for directly using the waste heat, e.g. from combined heat and power system (CHPS), while the brine tank integrated into the 73 series allows the storage of solar thermal energy and hence increases the total efficiency of your installations. The combination of first-class components

with precise control and regulation systems guarantees economical operation at all times, while ensuring the highest degree of comfort air conditioning. Sorpsolair systems are designed for all office and business buildings, as well as many other building types.

Adconair

FULL COUNTERFLOW HEAT RECOVERY

Eurovent seal refers to range Menerga Air, more information on page 6. Check ongoing validity of certificate: www.eurovent-certification.com or www.certiflash.com

Adconair 76 13 01 with refrigeration system - simplified illustration

With its full counterflow plate heat exchanger, the Adconair 76 series is setting new standards in the ventilation industry. The new heat exchanger works with a real counterflow proportion of over 80%. The internal pressure losses of the recuperator is just 150 Pa. Adconair units are optimally adapted for use in comfort

air conditioning. The unit series is designed to comply with the requirements of the highest energy efficiency classes. Ideal areas of application include all residential and non-residential buildings. Thanks to their high capacity and intelligent regulation system, the units always create an excellent indoor climate.

Available options:

- Adiabatic evaporative cooling
- AdiabaticPro
- Compressor refrigeration system, also available as reversible system

At a glance:

- Designed for the requirements of the highest energy efficiency classes
- HRC class H1, even at high air velocities
- Thermal bridge factor $k_b = 0.78$ - class TB1
- Two-stage supply air filtration
- Meets the requirements of the German Energy Saving Ordinance (EnEV) and the German Renewable Energies Heating Law (EEWärmeG)

AquaCond 44 08 21 - simplified illustration
Picture shows special equipment heat recovery bypass

AquaCond

HEAT RECOVERY FROM WASTE WATER

Far too often, warm waste water is discharged into the sewer system, together with all the energy it contains. Units in the AquaCond series recover the majority of this heat energy and transfer it to the clean water. The combination of recuperator and heat pump means that

only approx. 10% of the energy is required that would be needed by a conventional heating system. The heat exchanger cleaning system integrated in this series even allows the units to be used where the waste water is contaminated with dirt. Recover valuable energy,

anywhere that warm waste water is produced and simultaneously warm clean water has to be provided, e.g. in the shower areas of swimming pools, hospitals or residential homes, in laundries and in many industrial processes.

At a glance:

Drysolair

ENERGY-SAVING AIR DRYING

Automatically selects the most economical operating mode!

Drysolair 11 15 01 - simplified illustration

Units in the Drysolair series were developed especially for removing high levels of moisture from inside a building. Through the precooling in the recuperator of the air to be dried, the unit works with considerably lower compressor performance than a simple heat pump

system and creates a consistently good climate in ice rinks. It is also suited to the drying of buildings or industrial drying processes. The combination of first-class components with precise control and regulation guarantees economical operation at all times and

adjusts the temperature and humidity to requirements.

At a glance:

- ▶ For all drying applications
- ▶ Low connection capacity through the upstream installation of a recuperator
- ▶ Corrosion-free cross counterflow plate heat exchanger
- ▶ Intelligent air bypass duct
- ▶ Compact design

- Moisture content of the process air remains unaffected
- Low airflow rate required for heat dissipation
- Excellent PUE values of up to 1.1

Automatically selects the most economical operating mode!

Hybritemp 98 93 01 - simplified illustration

Hybritemp

COMPACT CHILLED WATER UNITS

Cooling systems using chilled water can be found in a wide range of areas: Whether for discharging excess heat from rooms with high thermal loading, for cooling industrial manufacturing processes or for the comfort air conditioning of buildings. The units of the Hybritemp 97 and 98 series are optimally adapted to these requirements. The "all-in-one" unit with a small equipment footprint offers efficient cooling. It is generally not necessary for cooling system components to be installed at or on the exterior of the building – and this drastically reduces the overall investment costs.

At a glance:

- **Efficient cooling through the use of natural resources**
- **Very high power density while simultaneously having high EER and ESEER values**
- **Compressor refrigeration system and free cooler optimally adapted to the respective application**
- **Compact design thanks to integrated recooling system, removing the need for cooling system components on the facade or on the roof**

Hybritemp 97 – efficiency-optimised

Unit type	Length (mm)	Width ¹ (mm)	Height ² (mm)	Weight ³ (kg)	Cooling capacity ⁴ (kW)	ESEER ⁵
97 04 01	3,700	890	1,650	1,470	33 - 48	5.5
97 05 01	3,700	1,050	1,650	2,070	45 - 64	5.5
97 06 01	4,340	730	2,130	2,490	56 - 81	5.5
97 10 01	4,500	1,050	2,130	3,250	74 - 106	5.4
97 13 01	4,660	1,370	2,130	4,390	118 - 168	5.5
97 16 01	4,820	1,690	2,130	5,240	148 - 217	5.5
97 19 01	4,820	2,010	2,130	6,110	172 - 247	5.2

Hybritemp 98 – performance-optimised

Unit type	Length (mm)	Width ¹ (mm)	Height ² (mm)	Weight ³ (kg)	Cooling capacity ⁴ (kW)	ESEER ⁵
98 04 01	3,700	890	1,970	2,070	65 - 93	4.7
98 05 01	3,700	1,050	1,970	2,270	79 - 112	4.7
98 06 01	4,980	730	2,450	2,800	102 - 145	4.7
98 10 01	4,980	1,050	2,450	3,220	133 - 189	5.0
98 13 01	4,660	1,370	2,450	4,830	196 - 278	4.9
98 16 01	4,820	1,690	2,450	5,700	244 - 350	5.1
98 19 01	4,820	2,010	2,450	7,170	319 - 455	4.9

1 Door fitting assembly increases unit width by 25 mm each operating side
 2 incl. 120 mm base frame
 3 Empty weight, no operation weight
 4 dependent on flow/return temperature and water flow rate, at OA = 32° C; 40% r.h.
 5 at flow = 6° C

For service work, a clearance corresponding to dimension width is required on the operating side of the unit. If the width is smaller than one metre, please leave a clearance of one metre. Please comply with the dimensions for body size, air duct connections and electrical switch cabinet. Please seek approval of technical data and specifications prior to start of the planning process.

Multifunction Hall Osijek Croatia

THE MENERGA UNIT KEY

e.g. Resolair 64 12 01

Resolair	64	12	01
Name	Series	Installation size	Design

Series	Name	Function	Equipment	Design
11	Drysolair	Air drying	Heat pump, recuperator	
14	Frecolair	Ventilation/cooling	Free cooling, compressor refrigeration system	
19	ThermoCond	Indoor swimming pool air conditioning	Cross-counterflow heat exchanger	01 Indoor installation 91 Outdoor installation
23	ThermoCond		Cross-counterflow-cross heat exchanger	
29	ThermoCond		Cross-counterflow heat exchanger, heat pump	
38	ThermoCond		Full counterflow plate heat exchanger, volume flow reduction as required	
39	ThermoCond		Asymmetrical high-capacity heat exchanger, output-controlled heat pump, fresh water heater, volume flow reduction as required	
44	AquaCond	Heat recovery from waste water	Heat pump, counterflow coaxial recuperator, heat pump, automatic heat exchanger cleaning	0 WWHE: Cu FWHE: Cu 1 WWHE: Cu FWHE: Cu tin-plated 2 WWHE: Cu-Ni FWHE: Cu 3 WWHE: Cu-Ni FWHE: Cu tin-plated * WWHE=Waste Water Heat Exchanger * FWHE=Fresh Water Heat Exchanger
52	Trisolair	Comfort air conditioning, recuperative heat recovery	Cross-counterflow-cross heat exchanger, air volume flow rate up to 5,000 m ³ /h	01 Indoor installation 91 Outdoor installation
54	Dosolair		Double plate heat exchanger, max. flow rates up to 52,200 m ³ /h	
56	Adsolair		Double plate heat exchanger, adiabatic evaporative cooling, optimum flow rates up to 52,200 m ³ /h	
58	Adsolair		Double plate heat exchanger, adiabatic evaporative cooling, compressor refrigeration system, max flow rates up to 52,800 m ³ /h	
59	Trisolair		Cross-counterflow-cross heat exchanger, compressor refrigeration system, air volume flow rate up to 4,800 m ³ /h	
62	Resolair	Comfort and process air conditioning, regenerative heat recovery	Heat accumulator module, max. flow rates up to 4,300 m ³ /h	
64	Resolair		Heat accumulator module, max. flow rates up to 51,000 m ³ /h	
65	Resolair		Heat accumulator module, air flow rates up to 40,000 m ³ /h	
66	Resolair		Heat accumulator module, compressor refrigeration system, max. flow rates up to 4,300 m ³ /h	
68	Resolair		Heat accumulator module, compressor refrigeration system, max. flow rates up to 51,000 m ³ /h	
72	Sorpsolair	Sorption-based air conditioning	Double plate heat exchanger, adiabatic evaporative cooling, sorptive dehumidification, max. flow rates up to 14,900 m ³ /h	
73	Sorpsolair		Double plate heat exchanger, adiabatic evaporative cooling, sorptive dehumidification, brine accumulator, max. flow rates up to 14,900 m ³ /h	
75	Adcoolair	Recirculating air cooling	Free cooling, adiabatic evaporative cooling, compressor refrigeration system	
76	Adconair	Comfort air conditioning, recuperative heat recovery	Counterflow-plate heat exchanger, max. air volume flow up to 35,600 m ³ /h, with adiabatic evaporative cooling, AdiabaticPro or refrigeration system	
97	HybriTemp	Cold water set	Indirect free cooling, adiabatic evaporative cooling, efficiency-optimised compressor refrigeration system	
98	HybriTemp		Free cooling, adiabatic evaporative cooling, efficiency-optimised compressor refrigeration system	

Creating a good climate.
For over 35 years. Worldwide.
